My three priorities for impact in SLT/SLP research and teaching

Pertti Palo

5 May 2026

Land acknowledgement

I live in amiskwacîwâskahikan / Edmonton.

My three priorities

1. **Economic Impact:** I train resilient and future-proofed workers.
2. **Health Impact:** I develop, teach, and advocate for accessible clinical tools.
3. **Societal Impact:** I work to ensure health systems and research serve the entire population.

Priority 1: Training resilient and future-proofed workers

- Focus on foundational skills such as finding, critiquing, and curating information.
- Teach students how to learn with intention in general and especially how to efficiently learn and integrate new methods into their professional practice.
- I do not just tell of new tools, but I build the spaces for students to learn in practice and think critically about tongue ultrasound, air flow, electroglottography etc.
- Provide joint courses with other programs to teach students practical collaboration with other professionals (e.g. physicians, occupational therapists, physical therapists, even engineers).

Priority 2: Accessible clinical tools

- Articulation provides a deeper understanding of speech production: It links neural processes and the produced speech.
- Ultrasound is my go-to method for articulation because it is relatively cheap, very portable, and intuitive for users who are knowledgeable in articulation and anatomy.
- It is useful in studying pathologies such as stuttering and Parkinsons disease, and it is an effective way of providing biofeedback.
- Example of speech analysis with PATKIT.
- Ultrasound video of silent speech articulation.

PLACE HOLDER SLIDE: PATKIT example

Priority 3: Serving the entire population

- To connect academia with the general public I regularly contribute to a role-playing convention in Finland on the topics of speech articulation and responsible use of existing languages in fictional settings.
- For last two years I have been building relationships with Indigenous communities in and around Edmonton.
- Decolonisation and social justice work are necessary in ensuring our health systems and research are representative of all of humanity and not just some fraction of it.
- In Ireland I can see that my skills in community connection building can be useful in working with for example the Traveller community and migrant populations.

Thank you!
